24 Index 84
1 Introduction

Thank you for choosing a METTLER TOLEDO balance.

The semi-micro balances of the NewClassic line combine a large number of weighing possibilities with easy operation.

These operating instructions apply to semi-micro balance MS 5-place models in the NewClassic line.

Please observe the following notes:

Some illustrations in these operating instructions are based on MS-S/MS-L models. They therefore might differ in some cases. However, functionality is not affected.

1.1 Conventions and Symbols Used in These Operating Instructions

Key designations are indicated by double angular brackets (e.g. « «).

This symbol indicates press key briefly (less than 1.5 s).

This symbol indicates press and hold key down (longer than 1.5 s).

This symbol indicates a flashing display.

This symbol indicates an automatic sequence.

These symbols indicate safety notes and hazard warnings which, if ignored, can cause personal danger to the user, damage to the balance or other equipment, or malfunctioning of the balance.

This symbol indicates additional information and notes. These make working with your balance easier, as well as ensuring that you use it correctly and economically.
2 Safety Precautions

Always operate and use your balance only in accordance with the instructions contained in this manual. The instructions for setting up your new balance must be strictly observed.

If the balance is not used according to these Operating Instructions, protection of the balance may be impaired and METTLER TOLEDO assumes no liability.

It is not permitted to use the balance in hazardous environments.

For use only in dry interior rooms.

Use only the original AC adapter delivered with your balance.

Do not use sharply pointed objects to operate the keyboard of your balance! Although your balance is very ruggedly constructed, it is nevertheless a precision instrument. Treat it with corresponding care.

Do not open the balance: It does not contain any parts which can be maintained, repaired, or replaced by the user. If you ever have problems with your balance, contact your METTLER TOLEDO dealer.

Use only balance accessories and peripheral devices from METTLER TOLEDO; they are optimally adapted to your balance.

Hazard of electric shock if the power cable is damaged! Check the power cable for damage regularly. Unplug the power cord immediately if the power cable is damaged.

Disposal

In conformance with the European Directive 2002/96/EC on Waste Electrical and Electronic Equipment (WEEE) this device may not be disposed of in domestic waste. This also applies to countries outside the EU, per their specific requirements.

Please dispose of this product in accordance with local regulations at the collecting point specified for electrical and electronic equipment. If you have any questions, please contact the responsible authority or the distributor from which you purchased this device. Should this device be passed on to other parties (for private or professional use), the content of this regulation must also be related.

Thank you for your contribution to environmental protection.

4 Setting up the Balance

The balance must be disconnected from the power supply when carrying out all setup and mounting work.

4.1 Unpacking and Delivery Inspection

a) Open the packaging and carefully remove all components.
b) Check the delivered items.

The standard scope of delivery contains the following items:
- Balance with Draftshield
- Weighing pan with pan support
- Draft ring
- Drip tray
- Protective cover
- AC adapter
- Country specific power cable
- Operating instructions (this document)
- Quick Guide
- EC declaration of conformity

4.2 Installing the Components

Push the side glass doors back as far as will go and place the following components on the balance in the specified order:

a) Place the drip tray (1) into the correct position.
b) Place the weighing pan (3).
c) Place the draft ring (2).

Note: Cleaning the draft shield see section "Maintenance and cleaning".
4.3 Selecting the Location and Leveling the Balance

Your balance is a precision instrument and will thank you for an optimum location with high accuracy and dependability.

4.3.1 Selecting the Location

Select a stable, vibration-free position that is as horizontal as possible. The surface must be able to safely carry the weight of a fully loaded balance.

Observe ambient conditions (see Technical Data).

Avoid the following:

- Direct sunlight
- Powerful drafts (e.g. from fans or air conditioners)
- Excessive temperature fluctuations

4.3.2 Leveling the Balance

The balance has a level indicator and two adjustable leveling feet to compensate for slight irregularities in the surface of the weighing bench. The balance is exactly horizontal when the air bubble is in the middle of the level glass.

**Note:** The balance should be leveled and adjusted each time it is moved to a new location.

Adjust the two leveling feet appropriately until the air bubble comes to rest exactly in the middle of the glass:

- Air bubble at "12 o’clock" turn both feet clockwise
- Air bubble at "3 o’clock" turn left foot clockwise, right foot counterclockwise
- Air bubble at "6 o’clock" turn both feet counterclockwise
- Air bubble at "9 o’clock" turn left foot counterclockwise, right foot clockwise

4.3.3 Power Supply

Your balance is supplied with an AC adapter with a country-specific power cable. The power supply is suitable for all line voltages in the range: 100 - 240 VAC, 50/60 Hz (for exact specifications, see section "technical data").
• First, check the local line voltage is in the range 100 - 240 VAC, 50/60 Hz and whether the power plug fits your local power supply connection. **If this is not the case, on no account connect the balance or the AC adapter to the power supply**, but contact the responsible METTLER TOLEDO dealer.

• **Only plug the adapter into a socket which is grounded.**

**Important:**

• Before operating, check all cables for damage.
• Guide the cables so that they cannot become damaged or interfere with the weighing process!
• Take care that the AC adapter cannot come into contact with liquids!
• The power plug must be always accessible.

Allow your balance to warm up for 60 minutes to enable it to adapt itself to the ambient conditions.

Connect the AC adapter to the connection socket on the back of the balance (see figure) and to the power line. Secure the connection to the balance by screwing the plug tight.
4.3.4 Left/Right Operating of the Glass Draft Shield

The glass draft shield of your balance can be adapted to the environmental conditions and your weighing style, as well as to the type of weighing and loading.

The position of the handles determines which door(s) of the draft shield (left, right, or both) is/are opened.

Try various different combinations by moving the external handles into the upper or lower position. We recommend you to set up the glass draft shield so that it only opens on the side where the balance is loaded. Your balance then works faster, because there are fewer troublesome currents of air than when both doors of the draft shield are opened together.

4.3.5 Weighing Below the Balance

So that weighings can be carried out below the working surface (below-the-balance weighing), your balance is provided with a special hanger.

a) Switch off the balance and unplug the cable of the AC adapter from the back of the balance.

b) Remove any interface cable.

c) Push the side doors and the top door of the glass draft shield completely to the back. Note: Top cover must be closed.

d) Remove the weighing pan, the draft ring and the drip tray.

e) Carefully tip the balance over backwards, until it is lying on its back.

f) Remove the cap (A) and retain it. The hanger (B) for weighing below the balance is easily accessible now.

g) Carefully turn the balance to its normal position and reinstall all components in the reverse order.

4.3.6 Transporting the Balance

Transporting over short distances

a) Switch off the balance and remove the power cable and any other cables from the balance.

b) Hold the balance with both hands as shown. Carefully lift the balance and carry it to its new location.

c) Refer to the notes in Section "Selecting the location" regarding the choice of an optimal location.

Caution:
Please do not lift the balance by the glass draft shield as not to damage it.
Transporting over long distances

If you would like to transport or send your balance over long distances, use the complete original packaging.

4.4 Adjustment (Calibration)

To obtain accurate weighing results,

- the balance must be adjusted to match the gravitational acceleration at its location. Adjusting is necessary:
  - before the balance is used for the first time.
  - at regular intervals during weighing service.
  - after a change of location.
- the balance must be connected to the power supply for approximately,
  - 30 minutes for balances with readability of 1 mg to 5 g
  - 60 minutes for balances with readability of 0.01 mg to 0.1 mg
in order to reach operating temperature before adjusting.

4.4.1 Fully Automatic Adjustment FACT

Note: On models with FACT only.

The factory setting is fully automatic adjustment FACT (Fully Automatic Calibration Technology) with the internal weight (see also section “The Menu”). In this setting, you have no need worry about adjusting your balance.

The balance adjusts itself automatically:

- after the warm-up phase on connection to the power supply.
- when a change in the ambient conditions, e.g. the temperature, could lead to a noticeable deviation in the measurement.
- on a predefined time. (see menu topic “FACT”)  
- time interval. (with OIML accuracy class II approved models)

4.4.2 Manual Adjustment with Internal Weight

Requirement: To carry out this operation, in the menu topic “CAL” (Adjustment) of advanced menu “ADJ.INT” must be selected.

a) Unload weighing pan
b) Press «<» to execute “Internal Adjustment”.

The balance adjusts itself automatically. The adjusting is finished when the message “ADJ DONE” appears briefly on the display. The balance returns to the last active application and is ready for operation.
Sample adjustment printout using internal weight:

```
- Internal Adjustment --

METTLER TOLEDO

Balance Type     MS4002S
SNR           1234567890

Temperature      22.5 °C
Diff               3 ppm

Adjustment done
-----------------------
```

4.4.3 Manual Adjustment with External Weight

**Requirement:** To carry out this operation, in the menu topic "CAL" (Adjustment) of advanced menu "ADJ.EXT" must be selected.

a) Have required adjustment weight ready.
b) Unload weighing pan.
c) Press « » briefly to execute "External Adjustment". The required (pre-defined) adjustment weight value flashes on the display.
d) Place adjustment weight in center of pan. The balance adjusts itself automatically.
e) When "0.00 g" flashes, remove adjustment weight.

The adjusting is finished when the message "ADJ DONE" appears briefly on the display. The balance returns to the last active application and is ready for operation.
Sample adjustment printout using external weight:

- External Adjustment --

METTLER TOLEDO

Balance Type  MS4002S
SNR  1234567890

Temperature  22.5 °C
Nominal  2000.00 g
Actual  1999.99 g
Diff  5 ppm

5 Weighing Made Simple

This section shows you how to perform simple weighings and how you can accelerate the weighing process.

5.1 Switching the Balance On and Off

This section shows you how to perform simple weighings and how you can accelerate the weighing process.

Switching On

- a) Remove any load from weighing pan.
- b) Press «On».

The balance performs a display test (all segments in the display light up briefly), "WELCOME", Software version, Maximum load and Readability appears briefly. (Startup "FULL" mode only)

The balance is ready for weighing or for operation with the last active application.

Switching Off

Press and hold the «Off» key until "SHUTOFF" appears on the display. Release the key.

After it has been switched off, your balance is in the standby mode. The display shows date, time, maximum load and readability. As your balance needs no warm-up time in the standby mode and is immediately ready for weighing.

When Quickstart “QUICK” (Advanced menu, topic “STARTUP”) is selected: If you wish to perform a weighing, you need now only place the sample on the weighing pan and the balance immediately displays the result. There is no need to switch it on with the «On/Off» key.

Note:

- Quickstart is not possible with approved balances (only available in selected countries).
- Standby mode is available on line powered balances only.
5.2 Performing a Simple Weighing

a) Press «O/T» to zero the balance.
   **Note:** If your balance is not in the weighing mode, press and hold the «O/T» key down until “WEIGHING” appears in the display. Release the key. Your balance is in the weighing mode and set to zero.

b) Place weighing sample on the weighing pan.

c) Wait until the instability detector “O” disappears and the stability beep sounds.

d) Read the result.

5.3 Zero Setting / Taring

Zero setting

a) Unload the balance.

b) Press «O/T» to set the balance to zero. All weight values are measured in relation to this zero point (see menu topic “ZERO RNG”).

   **Note:** Use the «O/T» zeroing key before you start with a weighing.

Taring

If you are working with a weighing container, first set the balance to zero.

a) Place empty container on the balance. The weight is displayed.

b) Press «O/T» to tare the balance.

   “0.00 g” and “Net” appears in the display. “Net” indicates that all weight values displayed are net values.

   **Note:**
   - If the container is removed from the balance, the tare weight will be shown as a negative value.
   - The tare weight remains stored until the «O/T» key is pressed again or the balance is switched off.
   - With METTLER TOLEDO DeltaRange balances, the fine range with its 10 times smaller display increments (depending on the model) is available again after every taring operation.

5.4 METTLER TOLEDO DualRange Balances

METTLER TOLEDO DualRange balances have two ranges. These models have a fix fine (semi-micro) range between 0 g and “Maximum load, fine range”. In this fine range the balance shows the result with a higher resolution, i.e. with one decimal place more.
5.5 Switching Weight Units

The «» key can be used at any time to toggle between weight unit "UNIT 1", "RECALL" value (if selected) and weight unit "UNIT 2" (if different from weight unit 1) and the application unit (if any).

5.6 Recall / Recall Weight Value

Recall stores stable weights with an absolute display value bigger than 10d.

**Requirement:** The function "RECALL" must be activated in the menu.

- a) Load weighing sample. The display shows weight value and stores stable value.
- b) Remove weighing sample. When the weight is removed the Display shows zero.
- c) Press «». The display shows last stored stable weight value for 5 seconds together with asterisk (*) and Memory (M) symbols. After 5 seconds the display goes back to zero. This can be repeated unlimited times.

**Delete last weight value**

As soon a new stable weight value is displayed, the old recall value becomes replaced by the new weight value. When pressing «→ O/T ↔», the recall value is set to 0.

**Note:** If the power is switched off, the recall value is lost. The recall value can not be printed.

5.7 Weighing with the Weighing-in Aid

The weighing-in aid is a dynamic graphic indicator which shows the used amount of the total weighing range. You can thus recognize at a glance when the load on the balance approaches the maximum load.

5.8 Print / Transmit Data

Pressing the «» key transmits the weighing results over the interface e.g. to a printer or a PC.
6 The Menu

6.1 What is in the Menu?

The Menu allows you to match your balance to your specific weighing needs. In the menu you can change the settings of your balance and activate functions. The main menu has 4 different menus and these contain 45 different topics, each of which allows you various selection possibilities. For Menu “PROTECT” see chapter “Description of menu topics” section “Main menu”.

Note: See Quick Guide for the graphical overview of the menu (Menu Map) with all setting possibilities.

### 6.2 Menu Operation

In this section you will learn how to work with the menu.

#### Select Menu

- **a)** Press «**» to activate main menu. The first menu “BASIC” is displayed (except menu protection is active).
- **b)** Press «**» repeatedly to change menu (Scrolling down/up «**» / «**» keys).
- **c)** Press «**» to confirm the selection.

**Note:** The menu selection “BASIC”, “ADVANCED” or “INT.FACE” can not be saved. The selection “PROTECT” must be saved.

#### Select Menu Topic

Press «**». The next menu topic appears in the display. Each time the «**» or the «**» key is pressed, the balance switches to the next menu topic; the «**» key to the previous menu topic.

#### Change Settings in a Selected Menu Topic

The “**” flashing symbol in the display indicates selectable options available.

- **a)** Press «**». The display shows the current setting in the selected menu topic. Each time «**» or «**» is pressed, the balance switches to the next selection; press «**» to the previous selection. After the last selection, the first is shown again.
- **b)** Press «**», the selected setting is accepted but not yet executed. The setting are executed only after “SAVE:YES” has been confirmed.

Change Settings in a Submenu Selection
The same procedure as for menu topics.

Input Principle of Numerical Values
a) Press «−» for input of numerical values.
b) Press «<» to select a digit or a value (depending on the application). The selected digit or the selected value is blinking.
c) For changing digits or values, press «<−» to scroll up or «<» to scroll down.
d) Press «−» to confirm the input.

Saving Settings and Closing the Menu
a) Press «ilih» briefly to leave menu topic.
b) Press «<−» to execute "SAVE:YES". Changes are saved.
c) Press «<» to execute "SAVE:NO". Changes are not saved. To toggle between "SAVE:YES" and "SAVE:NO" press «<».

Cancel
For leaving menu topic or menu selection without saving press «C» (one step back in the menu).

Note: If no entry is made within 30 seconds, the balance reverts to last active application mode. Changes are not saved. If changes are made, the balance asks "SAVE:NO".

6.3 Description of Menu Topic
In this section you will find information regarding the individual menu topics and the available selections.

6.3.1 Main Menu
Selecting the menu.

"BASIC" The small "BASIC" menu for simple weighing is displayed.
"ADVANCED" The extended "ADVANCED" menu for further weighing settings is displayed.
"INT.FACE" The menu "INT.FACE" for all interface parameter settings for peripheral devices e.g. printer is displayed.
"PROTECT" Menu protection. Protection of balance configurations against unintended manipulation.
"OFF" Menu protection is off. (Factory setting)
"ON" Menu protection is on. The menu BASIC, ADVANCED and INT.FACE are not displayed. This is indicated with " Giấy" in the display.
The Menu

6.3.2 Basic Menu

"DATE" – Date
Setting the current date according to date format.
Note: A reset of the balance will not change this setting.

"TIME" – Time
Setting the current time according to time format

   "+1H" Set the current time forwards by 1 hour (to adjust summer or winter time). (Factory setting)
   "-1H" Set the current time backwards by 1 hour (to adjust summer or winter time).
   "SET TIME" Enter the current time.

Note: A reset of the balance will not change this setting.

"UNIT 1" – Weight Unit 1
Depending on requirements, the balance can operate with the following units (depending on the model)
- Only those weight units allowed by the appropriate national legislation are selectable.
- With approved balances, this menu topic has a fixed setting and cannot be changed.
- Conversion table for weight units see chapter Appendix.

Units:

<table>
<thead>
<tr>
<th>Unit</th>
<th>Description</th>
<th>Unit</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>g</td>
<td>Gram</td>
<td>dwt</td>
<td>Pennyweight</td>
</tr>
<tr>
<td>kg</td>
<td>Kilogram</td>
<td>mom</td>
<td>Momme</td>
</tr>
<tr>
<td>mg</td>
<td>Milligram</td>
<td>msg</td>
<td>Mesghal</td>
</tr>
<tr>
<td>ct</td>
<td>Carat</td>
<td>tlb</td>
<td>Tael Hong Kong</td>
</tr>
<tr>
<td>lb</td>
<td>Pound</td>
<td>tis</td>
<td>Tael Singapore</td>

<td>Ounce (troy)</td>
<td>tola</td>
<td>Tola</td>
</tr>
<tr>
<td>GN</td>
<td>Grain</td>
<td>baht</td>
<td>Baht</td>
</tr>
</tbody>
</table>

1) factory setting
2) not with 0.01 mg, 0.1 mg and 1 mg balances
3) with 0.01 mg, 0.1 mg and 1 mg balances
4) the Malaysian tael has the same value

"UNIT 2" – Weight Unit 2
If it is required to show the weighing results in weighing mode in an additional unit, the desired second weight unit can be selected in this menu topic (depending on the model). Units see "UNIT 1". Select "NO", if you do not want to use "UNIT 2".
Note: Only those weight units allowed by the appropriate national legislation are selectable.

"KEY BEEP" – Key Beep
This menu topic allows you to select the volume of the key beep. The according key beep is emitted during the setting.

- "MED" Medium level (Factory setting)
- "HIGH" High level
- "OFF" Beep switched off
- "LOW" Low level

"STAB.BEEP" – Stability Beep
If the unstable symbol disappears, the stability beep becomes active. This menu topic allows you to preselect the volume of the stability beep.

- "MED" Medium level (Factory setting)
- "HIGH" High level
- "OFF" Beep switched off
- "LOW" Low level

"RESET" – Reset Balance Settings
This menu topic allows you to cal-up the factory settings.
To toggle between "YES?" and "NO?" press «» (or «+» or «–»).
Note: A reset of the balance will not change the "DATE", "TIME" and "ZERO RNG" settings.

6.3.3 Advanced Menu

"ENVIRON." – Environment Settings
This setting can be used to match your balance to the ambient conditions.

- "STANDARD" Setting for an average working environment subject to moderate variations in the ambient conditions. (Factory setting)
- "UNSTABLE" Setting for a working environment where the conditions are continuously changing.
- "STABLE" Setting for a working environment which is practically free from drafts and vibrations.

"CAL" – Adjustment (calibration)
In this menu topic you can preselect the function of the «» key. Your balance can be adjusted with internal or external weights by pressing the «» key. If you have attached a printer to your balance, the data of the adjustment (calibration) are printed out.

- "ADJ.OFF" The adjustment is switched off. The «» key has no function.
- "ADJ.INT" Internal adjustment: adjustment is performed at a keystroke with the built-in weight (depending on the model, see technical data).
- "ADJ.EXT" External adjustment: adjustment is performed at a keystroke with a selectable external weight.
"100.00 g"  **Defining the external adjustment weight**: define the weight of the external adjustment weight (in grams).

**Factory setting**: depends on the model.

**"FACT" – Fully Automatic Adjustment**

Fully automatic internal adjustment (calibration) **FACT** (Fully Automatic Calibration Technology) provides fully automatic balance adjustment based on temperature criteria and on preselected time. (depending on the model, see technical data)

"TIME"  Execute FACT (with selected time).

"12:00"  Specify the time for a fully automatic adjustment to take place every day.

**Factory setting**: 12:00 (according to time format)

"OFF"  FACT is switched off.

**"FACT PRT." – Protocol Trigger for FACT**

This setting specifies whether an adjustment report should be printed automatically.

**Note**: This menu topic does not affect the printing of adjustments with an internal or external adjustment weight.

"OFF"  Protocol switched off: if the balance adjusts automatically (FACT), a protocol is not printed out.

"ON"  Protocol switched on: a record is printed out after every automatic adjustment of the balance (FACT).

**Note**: The protocol is printed out without a line for signatures.

**"DATE.FORM" – Date Format**

This menu topic allows you to preselect the date format.

The following date formats are available:

<table>
<thead>
<tr>
<th>Display examples</th>
<th>Printing examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;DD.MM.Y&quot;</td>
<td>01.02.2009</td>
</tr>
<tr>
<td>&quot;MM/DD/Y&quot;</td>
<td>02/01/09</td>
</tr>
<tr>
<td>&quot;Y-MM-DD&quot;</td>
<td>09-02-01</td>
</tr>
<tr>
<td>&quot;D.MMM Y&quot;</td>
<td>1.FEB.09</td>
</tr>
<tr>
<td>&quot;MMM D Y&quot;</td>
<td>FEB.1.09</td>
</tr>
</tbody>
</table>

**Factory setting**: "DD.MM.Y"

**"TIME.FORM" – Time Format**

This menu topic allows you to preselect the time format.

The following date formats are available:

<table>
<thead>
<tr>
<th>Display examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;24:MM&quot;</td>
</tr>
<tr>
<td>&quot;12:MM&quot;</td>
</tr>
<tr>
<td>&quot;24:MM&quot;</td>
</tr>
<tr>
<td>&quot;12:MM&quot;</td>
</tr>
</tbody>
</table>

**Factory setting**: "24:MM"
"RECALL" – Recall
This menu topic allows you to switch the "RECALL" function on or off. When it is switched on recall stores the last stable weight if the absolute display value was bigger than 10d.

"OFF"  "RECALL" switched off (Factory setting)
"ON"  "RECALL" switched on

Note: The recall value is displayed with an asterisk and cannot be printed.

"STARTUP" – Startup Mode
You can set your balance such that it either immediately starts from the standby mode when you load a weight or it must be switched on with the «ON/OFF» key after which it then performs a display test.

Note: This topic is not visible with approved balances (only available in selected countries).

"QUICK"  "Quickstart": The balance can be started directly from the standby mode and is immediately ready for weighing. You can load the weight in the standby mode and the balance immediately shows the current weighing result. This is the Factory setting

Note: Standby mode is available on line powered balances only.

"FULL"  Start with display test: You must switch on the balance with the «ON/OFF» key. After it has been switched on, it performs a display test for approx. 2 sec. in which all display elements lights up, it shows "WELCOME", software version, maximum load and readability. The balance is ready for weighing.

"SHUTOFF" – Automatic Shutoff
If the automatic shutoff function is activated, the balance automatically switches itself off after a preselected time of inactivity (i.e. with no key being pressed or changes of weight occurring etc.) and is switched to the standby mode.

"A.OFF 10" min  Automatic shutoff after 10 minutes of inactivity. (Factory setting)
"A.OFF –"  Automatic shutoff not activated.
"A.OFF 2" min  Automatic shutoff after 2 minutes of inactivity.
"A.OFF 5" min  Automatic shutoff after 5 minutes of inactivity.

"BCKLIGHT" – Backlight
Under this menu topic, the display backlight can be switched off automatically. If the automatic switch-off is activated, the backlight will turn off automatically after the selected period of inactivity has elapsed. The backlight is reactivated when a key is pressed or the weight is changed.

"B.L. ON"  Backlight is always on. (Factory setting)
"B.L. 30" s  Automatic switch-off after 30 seconds inactivity.
"B.L. 1" min  Automatic switch-off after 1 minute inactivity.
"B.L. 2" min  Automatic switch-off after 2 minutes inactivity.
"B.L. 5" min  Automatic switch-off after 5 minutes inactivity.
"DISPLAY" – Display Settings
This menu topic allows you to adjust brightness and contrast of the display.

"BRIGHTN" To set the brightness in 1% steps.
"50%" Factory setting: 50%
"CONTRAST" To set the contrast in 1% steps.
"75%" Factory setting: 75%

"AUTOZERO" – Automatic Zero Setting
This menu topic allows you to switch the automatic zero setting on or off.

"ON" "AUTOZERO" switched on (Factory setting). The automatic zero setting continuously corrects possible variations in the zero point that might be caused through small amounts of contamination on the weighing pan.

"OFF" "AUTOZERO" switched off. The zero point is not automatically corrected. This setting is advantageous for special applications (e.g. evaporation measurements).

Note: With approved balances, this setting is not available (only available in selected countries).

"ZERO RNG" – Zero Range
This menu topic allows you to set a zero limit for the «0/T» key. Up to and including this limit the «0/T» key will execute a zero. Above this limit the «0/T» key will execute a tare.

"1.2 g" To set the upper limit of the zero setting range as weight in the definition unit of the balance.
(Factory setting: 0.5% of weighing range)

Note: With approved balances, this setting is not available and fixed to 3e (only available in selected countries).

Note: A reset of the balance will not change this setting.

"LANGUAGE" – Language
Factory setting: Generally, the language of the destination country (if available) or English is set.
The following languages are available:

"ENGLISH" English
"DEUTSCH" German
"FRANCAIS" French
"ESPANOL" Spanish
"ITALIANO" Italian
"POLSKI" Polish
"CESKY" Czech
"MAGYAR" Hungarian

"ASSIGN:F1" – Assign Application Key F1
At this menu topic you can assign an application to the «F1» key. The following applications are available (depending on the model):

"COUNTING" Piece counting (Factory setting)
"PERCENT" Percent weighing
"STAT" Statistics
"FORMULA" Formulation / Net-Total
"TOTALING*  Totaling
"FACTOR M*  Multiplication factor
"FACTOR D*  Division factor

"ASSIGN:F2" – Assign Application Key F2
At this menu topic you can assign an application to the «F2» key. The following applications are available (depending on the model):

"PERCENT*  Percent weighing (Factory setting)
"STAT*  Statistics
"FORMULA*  Formulation / Net-Total
"TOTALING*  Totaling
"FACTOR M*  Multiplication factor
"FACTOR D*  Division factor
"COUNTING*  Piece counting

"ASSIGN:F3" – Assign Application Key F3
At this menu topic you can assign an application to the «F3» key. The following applications are available (depending on the model):

"STAT*  Statistics (Factory setting)
"FORMULA*  Formulation / Net-Total
"TOTALING*  Totaling
"FACTOR M*  Multiplication factor
"FACTOR D*  Division factor
"R. TEST"  Routine test
"COUNTING*  Piece counting
"PERCENT*  Percent weighing

"DIAGNOSE" – Diagnostics Application
At this menu topic you can start a diagnostic application. For more information see chapter application "Diagnostics".
The following diagnostics are available:

"REPEAT.T"  Repeatability test (models with internal weights only)
"DISPLAY"  Display test
"KEYPAD T"  Key test
"CAL. MOT. T"  Motor test (models with internal weights only)
"BAL. HIST"  Balance history
"CAL. HIST"  Calibration history
"BAL. INFO"  Balance information
"PROVIDER"  Service provider information
"SERV.ICON" – Service Reminder

This menu topic allows you to switch the service reminder "\(\text{I}\)" on or off.

"ON"  Service reminder "\(\text{I}\)" switched on (factory setting). You will be informed after a preset time (e.g. one Year or 8000 operating hours) to call service for recalibration. This will be indicated by the flashing service icon: "\(\text{I}\)". (Factory setting)

"OFF"  Service reminder "\(\text{I}\)" switched off.

"SRV.D.RST" – Service Date Reset

This menu topic allows you to reset service date and hours.

Note: This menu topic is only available if “SERV.ICON” setting “ON” was selected.

To toggle between "YES?" and "NO?" press «\(\text{S}\)» (or «\(+\)» or «\(-\)»)

6.3.4 Interface Menu

"RS232" – RS232C Interface

At this menu topic you can select the peripheral device connected to the RS232C interface and specify how the data is transmitted.

"PRINTER"  Connection to a printer. (Factory setting)

Note: Only one printer possible.

"PRT.STAB"  If the «\(\text{S}\)» key is pressed, the next stable weight value will be printed. (Factory setting)

"PRT.AUTO"  Every stable weight value will be printed, without pressing the «\(\text{S}\)» key.

"PRT.ALL"  If the «\(\text{S}\)» key is pressed, the weight value will be printed regardless of stability.

"PC-DIR."  Connection to a PC: the balance can send data (as a Keyboard) to the PC used for PC applications e.g. Excel.

Note: The balance sends the weight value without the unit to the PC.

"PRT.STAB"  If the «\(\text{S}\)» key is pressed, the next stable weight value will be sent followed by an enter. (Factory setting)

"PRT.AUTO"  Every stable weight value will be sent followed by an enter, without pressing the «\(\text{S}\)» key.

"PRT.ALL"  If the «\(\text{S}\)» key is pressed, the weight value will be sent followed by an enter regardless of stability.

"HOST"  Connection to a PC, Barcode Reader etc.: the balance can send data to the PC and receive commands or data from the PC.

"SEND.OFF"  Send mode switched off. (Factory setting)

"SEND.STB"  If the «\(\text{S}\)» key is pressed, the next stable weight value will be sent.

"SEND.CONT"  All weight value updates will be sent regardless of stability, without pressing the «\(\text{S}\)» key.

"SEND.AUTO"  Every stable weight value will be sent, without pressing the «\(\text{S}\)» key.
"SEND.ALL" If the «umably» key is pressed, the weight value will be sent regardless of stability.

"2.DISPLAY" Connection of an optional auxiliary display unit

**Note:** The transmission parameters cannot be selected. Settings are automatically set.

"HEADER" – Options for the Printout Header of individual values

This menu topic allows you to specify the information that is to be printed at the top of the printout for every individual weighing results (after pressing «umably»).

**Note:** This menu topic is only available if "PRINTER" setting was selected.

- "NO" The header is not printed (Factory setting)
- "DAT / TIM" Date and time are printed
- "D / T / BAL" Date, time and balance information (Balance type, SNR, Balance ID) are printed.

**Note:** Balance ID only if set.

"SINGLE" – Options for Printing out the Result of individual values

This menu topic allows you to specify the information that is to be printed for every individual weighing result (after pressing «umably»).

**Note:** This menu topic is only available if "PRINTER" setting was selected.

- "NET" The value of the Net weight from the current weighing is printed (Factory setting)
- "G / T / N" The values of the Gross weight, the Tare weight and the Net weight are printed

"SIGN.L" – Options for the Printout Footer for Signature Line of individual values

This menu topic allows you to set a footer for signature at the bottom of the printout for every individual weighing result (after pressing «umably»).

**Note:** This menu topic is only available if "PRINTER" setting was selected.

- "OFF" The signature footer is not be printed. (Factory setting)
- "ON" The signature footer is printed

"LINE.FEED" – Options for Complete the Printout of individual values

This menu topic allows you to specify the number of blank lines to complete the printout (line feed) for every individual weighing result (after pressing «umably»).

**Note:** This menu topic is only available if "PRINTER" setting was selected.

- "0" Possible numbers of blank lines: 0 to 99 (Factory setting = 0)

"ZERO PRT." – Options for "PRT.AUTO" 1)

This menu topic allows you to specify the auto print function "PRT.AUTO" for printing zero "YES" or "NO".

- "OFF" Zero is not be printed (Zero +/- 3d) (Factory setting)
- "ON" Zero is always printed

**Note:** This menu topic is only available if "PRT.AUTO" function of the "PRINTER" or "PC-DIR." was selected.
"COM.SET" – Options for the Data Communication Format (RS232C) (“HOST”) 

This menu topic allows you to set the data format depending on which peripheral device is connected.

**Note:** This menu topic is only available if “HOST” setting was selected.

"MT-SICS" The MT-SICS data transfer formats is used. (*Factory setting*)

For more information see section "MT-SICS Interface Commands and Functions".

"MT-PM" The following PM balance commands are supported:

- S Send value
- SI Send Immediate value
- SIR Send value and repeat
- SR Send next value and repeat
- SNR Send immediate value and repeat
- T Tare
- TI Tare Immediately
- B Base
- MI Modify ambient vibration
- MZ Modify Auto Zero
- M Modified settings reset
- ID Identify
- CA Calibrate
- D Display (only symbol N and G available)

"BAUDRATE" – Baud rate RS232C 

This menu topic allows you to match the data transmission to different serial RS232C receivers. The baud rate (data transfer rate) determines the speed of transmission via the serial interface. For problem-free data transmission the sending and receiving devices must be set at the same value.

The following settings are available:

- 600 bd, 1200 bd, 2400 bd, 4800 bd, 9600 bd, 19200 and 38400 bd. (default: 9600 bd)

**Note:**

- Not visible for 2nd display.
- Each device has separate settings.

"BIT/PAR." – Bit/Parity RS232C 

At this menu topic you can set the character format for the attached RS232C serial peripheral device.

- "8/NO" 8 data bits/no parity (*Factory setting*)
- "7/NO" 7 data bits/no parity
- "7/EVEN" 7 data bits/odd parity
- "7/ODD" 7 data bits/odd parity

**Note:**

- Not visible for 2nd display.
- Each device has separate settings.

"HD.SHAKE" – Handshake RS232C 

This menu topic allows you to match the data transmission to different RS232C serial receivers.

- "XON/XOFF" Software handshake (XON/XOFF) (*Factory setting*)
"RTS/CTS" Hardware handshake (RTS/CTS)
"OFF" No handshake

Note:
- Not visible for 2nd display.
- Each device has separate settings.

"RS E.O.L." – End of Line RS232C ¹)
At this menu topic you can set the "End of Line" character of the transmitted data to different RS232C serial receivers.

"(CR)(LF)" <CR><LF> Carriage Return followed by Line feed (ASCII-Codes 013+010) (Factory setting)
"(CR)" <CR> Carriage Return (ASCII-Code 013)
"(LF)" <LF> Line feed (ASCII-Code 010)

Note:
- Not visible for 2nd display.
- Each device has separate settings.

"RS CHAR" – Char Set RS232C ¹)
At this menu topic you can set the "Character Set" of the transmitted data to different RS232C serial receivers.

"IBM/DOS" Char Set IBM/DOS (Factory setting)
"ANSI/WIN" Char Set ANSI/WINDOWS

Note:
- Not visible for 2nd display.
- Each device has separate settings.

"USB" – USB Interface
At this menu topic you can select the mode of the "USB Device" interface and specify how the data is transmitted.

"USB" Select the mode of the "USB Device" interface
  "SEND.OFF" Send mode switched off (Factory setting)
  "SEND.STB" If the «» key is pressed, the next stable weight value will be sent.
  "SEND.CONT" All weight value updates will be sent regardless of stability, without pressing the «» key.
  "SEND.AUTO" Every stable weight value will be sent, without pressing the «» key.
  "SEND.ALL" If the «» key is pressed, the weight value will be sent regardless of stability.

Note: This port is not usable for printers or displays.
"USB COM.S." – Options for the Data Communication Format (USB)

This menu topic allows you to set the data format depending on which peripheral device is connected.

"MT-SICS" The MT-SICS data transfer formats is used. (Factory setting) For more information see section "MT-SICS Interface Commands and Functions".

"MT-PM" The following PM balance commands are supported:
- S Send value
- SI Send Immediate value
- SIR Send value and repeat
- SR Send next value and repeat
- SNR Send immediate value and repeat
- T Tare
- TI Tare Immediately
- B Base
- MI Modify ambient vibration
- MZ Modify Auto Zero
- M Modified settings reset
- ID Identify
- CA Calibrate
- D Display (only symbol N and G available)

Note: This menu topic is not available with MSxxxKLIPE models.

"USB E.O.L." – End of Line USB

At this menu topic you can set the "End of Line" character of the transmitted data to USB device.

"(CR)(LF)" <CR><LF> Carriage Return followed by Line feed (ASCII-Codes 013+010) (Factory setting)

"(CR)" <CR> Carriage Return (ASCII-Code 013)

"(LF)" <LF> Line feed (ASCII-Code 010)

"USB CHAR" – Char Set USB

At this menu topic you can set the "Character Set" of the transmitted data to USB device.

"ANSI/WIN" Char Set ANSI/WINDOWS (Factory setting)

"IBM/DOS" Char Set IBM/DOS

"INTERVAL" – Print Key Simulation

At this menu topic you can activate a simulation of the «µ» key. "INTERVAL" simulates a print key press every x seconds.

Range: 0 to 65535 seconds
0 sec: disables the print key simulation

Factory setting: 0 sec

Note: The executed action is according to the configuration of the print key. (see interface setting)

"ERGOSENS" – Settings for external key

The METTLER TOLEDO "ErgoSens" or external contact switches (optional, see section accessories) can be connected to the "Aux" connection and these can be used to execute certain weighing functions.

"OFF" Deactivate (Factory setting)
"->O<-" Zero setting
"->T<-" Taring
"PRINT" Print

1) Note for 2nd RS232C Interface

- If an optional 2nd interface is installed, the menu topic is displayed for each interface, e.g.
  "BAUDRATE.1" for standard interface
  "BAUDRATE.2" for optional 2nd interface

- Only one printer can be set if two RS232 interfaces are existing.
7 Application "Piece Counting"

The "Piece Counting" application allows you to determine the number of pieces put on the weighing pan.

**Requirement:** The function "COUNTING" must be assigned to an «Fx» key (see advanced menu topic "ASSIGN:Fx", factory setting: F1).

Activate function "COUNTING" by pressing and holding the appropriate assigned «Fx» key (factory setting: F1).

Piece Counting first requires the setting of a reference weight, there are 4 possibilities:

- **A** Setting the reference by multiple pieces with fix reference values.
- **B** Setting the reference by multiple pieces with variable reference values.
- **C** Setting the reference for 1 piece in weighing mode.
- **D** Setting the reference for 1 piece in manual mode.

**Setting possibility**

**A** Setting the reference by multiple pieces with fix reference values

a) Select a number of reference pieces by scrolling with «». Possible numbers* are 5, 10, 20 and 50.  
   * with approved balances in selected countries: min 10

b) Press «TARE» to tare. If using: place empty container on the weighing pan first or tare again.

c) Add the selected number of reference pieces to container.

d) Press «CONF» to confirm.
Setting possibility

**B Setting the reference by multiple pieces with variable reference values**

a) Select "VAR.REF" by scrolling with «🏃». Press «↩️» to confirm.

b) Select a number of reference pieces by scrolling up («+» key) or down («-» key). Speed up by press and hold. Possible numbers* are 1 to 999.

* with approved balances in selected countries: min 10

c) Press «→ O/T ←» to tare. If using: place empty container on the weighing pan first or tare again.

d) Add the selected number of reference pieces to container.

e) Press «↩️» to confirm.

**C Setting the reference for one piece in weighing mode**

a) Select "PCS.WGT" by scrolling with «🏃».

b) Press «→ O/T ←» to tare. If using: place empty container on the weighing pan first or tare again.

c) Add one reference piece to container. The weight of one piece is displayed.

d) Press «↩️» to confirm.

**Note:** With approved balances, this setting is not available in selected countries.

**D Setting the reference for one piece in manual mode**

a) Select "PCS.WGT" by scrolling with «🏃».

b) Press «↩️» to confirm.

c) Enter the final reference one piece weight by scrolling up («+» key) or down («-» key). Speed up by press and hold.

d) Press «↩️» to confirm.

**Note:** With approved balances, this setting is not available in selected countries.
Switching between manual mode and weighing mode
Press «» to switch between manual and weighing mode.

Note: By switching from weighing mode to manual mode the weight value will be transferred and can be changed manually.

Note: If without any key press within 60 seconds, the balance returns to the previous active application. Press «C» to cancel and returns to the previous active application.

On completion of the setting procedure, your balance is ready for piece counting.

Switching between piece count and weight display.
You can use the «» key at any time to switch the display between piece display, weighing unit "UNIT 1", "RECALL" value (if activated) and weighing unit “UNIT 2” (if different from “UNIT 1”).

Note:
• The "RECALL" value is displayed with an asterisk (*) and icon "M" and can not be printed.
• Take into account minimum values: min. reference weight = 10d (10 digits), min. piece weight* = 1d (1 digit)! * with approved balances in selected countries: min 3e
• The current reference weight remains stored until the reference setting is changed.
8 Application "Percent Weighing"

The “Percent Weighing” application allows you to check a sample weight as percentage to a reference target weight.

**Requirement:** The function "PERCENT" must be assigned to an «Fx» key (see advanced menu topic "ASSIGN:Fx", factory setting: F2).

Activate function percent weighing "PERCENT" by pressing and holding the appropriate assigned «Fx» key (factory setting: F2).

Percent Weighing first requires the setting of a reference weight that should corresponds to 100%, there are 2 possibilities:

A Setting the reference in manual mode (enter 100%).

B Setting the reference in weighing mode (weigh 100%).

Setting possibility

**A Setting the reference by manual mode (enter 100%)**

a) Press «\(\rightarrow\)» to activate manual mode.
b) Select the reference target weight (100%) by scrolling up («\(\leftarrow\)» key) or down («\(\rightarrow\)» key). Speed up by press and hold.
c) Press «\(\rightarrow\)» to confirm.

Setting possibility

**B Setting the reference by weighing mode (weigh 100%)**

a) Press «\(\rightarrow\) 0/T «\(\leftarrow\)» to tare the balance and to activate the weighing mode. If needed: place empty container on the weighing pan and tare again.
b) Load the reference weight (100%).
   **Note:** Reference weight must be at least +/- 10d.
c) Press «\(\rightarrow\)» to confirm.

Switching between manual mode and weighing mode

Press «\(\rightarrow\)» to switch between manual and weighing mode.

**Note:** By switching from weighing mode to manual mode the weight value will be transferred and can be changed manually.

**Note:** If without any key press within 60 seconds, the balance returns to the previous active application.

**On completion of the weighing-in procedure, your balance is ready for percent weighing.**
Switching between percent and weight display

You can use the «retch» key at any time to switch the display between percent display, weighing unit "UNIT 1", "RECALL" value (if activated) and weighing unit "UNIT 2" (if different from UNIT 1).

Note:

- The recall value is displayed with an asterisk (*) as well as icon "M" and cannot be printed.
- The current set weight remains stored until it is redetermined.
9 Application "Statistics"

The "Statistics" application allows you to generate statistics of weighing values. 1 to 999 values are possible. **Requirement:** The function "STAT" must be assigned to an «Fx» key (see advanced menu topic "ASSIGN:Fx"). Connect a printer or a PC if present.

- **a)** Activate function "STAT" by pressing and holding the appropriate assigned «Fx» key.
- **b)** To continue the last statistics press «↓». For a new statistical evaluation press «↓» to select "Yes" and press «↓» to clear the memory.

**Note:** If the memory is already cleared (sample counter is 0) the memory clear question will be not displayed.

### Weighing the first sample weight:
- **a)** Press «→O/T« to zero/tare the balance if needed.
- **b)** Load the first sample weight.
- **c)** Press «↓». The display shows the sample count "- 1 -" and the current weight is stored as sample and the weight is printed out. **Note:** When the sample counter is displayed you may press «C» to undo (drop) this sample.
- **d)** Unload the first sample weight.

### Weighing further sample weights:
The same procedure as for the first sample weight.
- • 1...999 samples are possible.
- • The next value will be accepted if the sample weight is in the range 70% –130% of the current average value. "OUT OF RANGE" will be displayed if the sample is not accepted.

### Results:
If the numbers of sample are greater than or equal to 2, press «↓», the results are displayed and printed.

<table>

10 Application "Formulation" (Net Total Formulation)

The "Formulation" (Net Total) application allows you to

- weigh in (add and store) up to 999 individual component weights and displays the total. If a printer is connected, the component weights are printed individually and as a total.
- tare/pre-tare and store up to 999 container weights and displays the total. If a printer is connected, the tare weights are printed out individually and as a total.

**Requirement:** The function "FORMULA" must be assigned to an «Fx» key (see advanced menu topic "ASSIGN:Fx"). Connect a printer or a PC if present.

**Note:** If the memory is already cleared (sample and tare/pre-tare counter is zero) the memory clear question will be not displayed.

**Tare container** (if used):

- Press «→ O/T ↔» to zero or tare the balance if needed.
- Place the empty container on the weighing pan.
- Press «→ O/T ↔». The container is tared and the tare count "- T1 -" is displayed and the tare weight is printed.

**Note:** If you pre-tare via MT-SICS (e.g. bar code reader) "- PT1 -" is displayed.

**Weighing the first component weight:**

- Load the first component weight.
- Press «→». The display briefly shows the component count "- 1 -", the current weight is stored as sample and the component weight is printed. The display is set back to zero.

**Weighing further component weights:**

The same procedure as for the first component weight with the same or new container).

- 1…999 sample values are possible.
- max 999 tare values are possible.
- max 999 pre-tare values are possible.
Results:
If the numbers of sample are greater than or equal to 2, press « », the results are displayed and printed.

Displayed results:

a) Press « » to show the next statistical value.

b) Press « C » to cancel displaying results and to continue weighing next component.

11 Application "Totaling"

The ‘TOTALING’ application allows you to weigh in different samples to add their weight values and to totalize them. 1 to 999 samples are possible.

**Requirement:** The function "TOTALING" must be assigned to an «Fx» key (see advanced menu topic "ASSIGN:Fx").

- a) Activate function "TOTALING" by pressing and holding the appropriate assigned «Fx» key.
- b) For a new totaling evaluation press «=» (or «+» or «–») to enter "Yes" and press «=» to clear the memory.
  
  **Note:** If the memory is already cleared (sample counter is 0) the memory clear question will be not displayed.
- c) Press «O/T» to zero or tare the balance.

**Weighing in the sample weight:**
- a) If using a container: place empty container on the weighing pan and press «O/T» to zero or tare the balance.
- b) Load the first sample weight.
- c) Press «=». The display shows the sample count "- 1 -" and the current weight is stored.
  
  **Note:** When the sample counter is displayed you may press «C» to undo (drop) this sample.
- d) Unload the first sample weight. The display shows zero.

**Weighing in further sample weights:**
The same procedure as for the first sample weight.

- 1...999 samples are possible.

**Results:**
If the numbers of sample are greater than or equal to 2, press «TOTAL», the results are displayed and printed.

**Displayed results:**
- a) Press «=» briefly to show the totalized value.
- b) Press «C» briefly to cancel.

---
12 Application "Multiplication Factor Weighing"

The "Multiplication Factor Weighing" application allows you to multiply the weight value (in grams) by a predefined factor (result = factor * weight) and have it calculated to a predefined number of decimal places.

Requirement: The function "FACTOR M" must be assigned to an «Fx» key (see advanced menu topic "ASSIGN:Fx").

Activate function "FACTOR M" by pressing and holding the appropriate assigned «Fx» key.

1 Setting the factor value:

a) Press «←» to execute "SET F.MUL". Either the factor 1 appears as default value or the factor that was saved most recently.

b) Press «↓» to select a digit. The selected digit is blinking.

c) For changing digits, press «+» to scroll up or «–» to scroll down.

d) Press «←» to confirm the selected factor (no automatic acceptance).

Note: Zero for multiplication factor value is outside the allowed range, the error message "FACTOR OUT OF RANGE" will be displayed.

2 Setting the step value:

"SET STEP" appears in the display, and the program changes automatically to allow the display increments to be entered. The smallest possible display increment appears as default value, or the last value that was saved.

a) Press «←» to execute "SET STEP".

b) Press «↓» to select a digit. The selected digit is blinking.

c) For changing digits, press «+» to scroll up or «–» to scroll down.

d) Press «←» to confirm the selected step (no automatic acceptance).

Note: The allowed range for the step depends on the factor and the resolution of the balance. If it is outside the allowed range the error message "STEP OUT OF RANGE" will be displayed.

Note: If without any key press within 60 seconds, the balance returns to the previous active application. Press «C» to cancel.

On completion of the setting procedure, your balance is ready for multiplication factor weighing.
**Weighing procedure**

a) Press **<→ O/T <→** to zero/tare.

b) Load sample weight on weighing pan.

c) Read the result. The appropriate calculation is then made using the weight of sample and the selected factor, the result being displayed with the selected display step.

**Note:** No units are displayed.

d) Unload sample weight.

**Toggling between displaying the calculated value and the measured weight:**

You can use the **<→** key to toggle between the calculated Value, weight value "UNIT 1", "RECALL" value (if selected) and weight value "UNIT 2" (if different from "UNIT 1").
13 Application "Division Factor Weighing"

The "Division Factor Weighing" divide a predefined factor by the weight value (in grams) (result = factor / weight) and have it rounded to a predefined number of decimal places. 

**Requirement:** The function "FACTOR D" must be assigned to an «Fx» key (see advanced menu topic “ASSIGN:Fx”).

Activate function "FACTOR D" by pressing and holding the «Fx» key.

### Setting the Factor Value:

1. Press «↓» to execute "SET F.DIV". Either the factor 1 appears as default value or the factor that was saved most recently.
2. Press «↓» to select a digit. The selected digit is blinking.
3. For changing digits, press «+» key to scroll up or «–» to scroll down.
4. Press «↓» briefly to confirm the selected factor (no automatic acceptance).

Note: Zero for division factor value is outside the allowed range, the error message "FACTOR OUT OF RANGE" will be displayed.

### Setting the step value:

"SET STEP" appears in the display, and the program changes automatically to allow the display increments to be entered. The smallest possible display increment appears as default value, or the last value that was saved.

1. Press «↓» to execute "SET STEP".
2. Press «↓» to select a digit. The selected digit is blinking.
3. For changing digits, press «+» to scroll up or «–» to scroll down.
4. Press «↓» to confirm the selected step (no automatic acceptance).

**Note:** The allowed range for the step depends on the factor and the resolution of the balance. If it is outside the allowed range the error message "STEP OUT OF RANGE" will be displayed.

**Note:** If without any key press within 60 seconds, the balance returns to the previous active application. Press «C» to cancel and returns to the previous active application.

**On completion of the setting procedure, your balance is ready for division factor weighing.**
Application "Division Factor Weighing"

Weighing procedure

a) Press \( \leftrightarrow O/T \leftrightarrow \) to zero/tare.

b) Load sample weight on weighing pan.

c) Read the result. The appropriate calculation is then made using the weight of sample and the selected factor, the result being displayed with the selected display step.

   **Note:** No units are displayed. To avoid a division by zero, the factor division is not calculated at zero.

d) Unload sample weight.

Toggling between displaying the calculated value and the measured weight:

You can use the \( \leftrightarrow \) key to toggle between the calculated Value, weight value "UNIT 1", "RECALL" value (if selected) and weight value "UNIT 2" (if different from "UNIT 1").
14 Application "Routine Test"

The "Routine Test" application allows you to determine the sensitivity of the balance. More about periodic sensitivity tests (routine tests) see: GWP® (Good Weighing Practice) on www.mt.com/gwp.

GWP gives clear recommendation for routine testing:

- how should I test my balance?
- how often?
- where can I reduce efforts?

More about test weights see www.mt.com/weights.

Requirement:
- The function "R. TEST" must be assigned to «F3» key (see advanced menu topic "ASSIGN:F3").
- It is recommended to connect a printer or a PC to the balance for showing the results.

a) Activate function "R. TEST" by pressing and holding the assigned «F3» key.

b) Select "No" (no tare weight used).
   If a tare weight is used during the test select "Yes" (use a tare weight). To toggle between "Yes" and "No" use «+» or «–».

c) Press «↓» to confirm the selection.

Note:
- It is recommended to test the sensitivity without tare load. (factory setting "No").
- If using tare: Make sure that tare weight plus test weight is not exceeding max. load.

Setting the reference test weight value
The default value of the test weight: Next smaller OIML weight than the maximum load of your balance according to the GWP® recommendation.

a) For changing the value, press «+» to scroll up or «–» to scroll down. Progressing speed by press and hold.

b) Press «↓» to confirm the value.

Setting the Control Limit
The default value of the control limit:
Test weight x weighing process tolerance / 2
Example: 5000 g x 0.1% / 2 = 2.50 g.

a) For changing the value, press «+» to scroll up or «–» to scroll down. Progressing speed by press and hold.

b) Press «↓» to confirm the value.
Setting the Warning Limit

The default value of the warning limit:
Warning limit = control limit / safety factor
Example: 2.5 g / 2 = 1.25 g.

a) For changing the value, press «+» to scroll up or «-» to scroll down. Progressing speed by press and hold.
b) Press «ENT» to confirm the value.

Note: The default values of control limit and the warning limit are evaluated according the GWP recommendation. These are based under the assumption that the weighing process tolerance is 0.1% and the safety factor is 2.

On completion of the setting procedure, your balance is ready for the routine test procedure.

Note: The test weight must be acclimatized to the ambient temperature of the balance.

a) Press «ENT» to start the test.
b) Follow the instructions on the display. If the test weight value is flashing: Load the test weight (displayed value).

The printout starts after the weighing pan is unloaded.

Exit the current test procedure:
Press and hold «ALM», «F1», «F2» for executing a new application.

Printout:

```
----- Routine Test -----

Value          5000.11 g
Warning L.     1.25 g
Control L.     2.50 g
Warning L.      OK
Control L.      OK
Signature

------------------------
```

What if Warning Limit or Control Limit are "FAILED"?
The "SOP for Periodic Sensitivity Tests (Routine Tests)" provides information about measures when routine tests fail. Find a download version of these SOPs on www.mt.com/gwp, link "GWP® The Program / Routine Operation".
Content of SOP:

- Preparation
- Test procedure
- Evaluation
- Deviation
  - If Warning Limit "FAILED"
  - If Control Limit "FAILED"
**15 Application "Diagnostics"**

The "Diagnostics" application allows you to carry out predefined diagnostics tests and to view or print predefined sets of balance information. This diagnostics tool helps you find errors faster and more efficiently.

**Requirement:** A printer or a PC is connected to the balance for showing the results.

a) Activate "ADVANCED" menu. (See section menu operation)
b) Activate function "DIAGNOSE" by pressing «  ».
c) Use «  » to select appropriate tests.

### 15.1 Repeatability Test

The repeatability test allows you to repeat tests with internal weight for a given number of times.

**Note:** On models with internal weights only.

a) Press «  » to activate repeatability test "REPEAT.T". "R. TST. 10" appears on the Display.
b) Enter the number of times (blinking) by pressing «  » or «  ». Possible values are 5, 10 (default), 20, 50, 100 times.
c) Press «  » to start the test. The message "RUNNING REPEAT TEST" is displayed till the tests are completed.
d) Press «  » to print the test information.
e) Press «  » to scroll forward through the displayed list.
f) Press «  » to cancel the test procedure. The balance will return to the topic "DIAGNOSE".

**Sample Information Displayed:**

Total Time     00:00:44
------------------------
```

Examples:

Repeatability test is a tool to do functional check with the balance. It may be performed:

- **To check function of balance**
  - during installation to store print out with installation documents.
  - after preventative maintenance to store print out with installation maintenance report.
  - when remarkable decrease of weighing performance occurs, so that you can email/fax print out to service support provider for diagnose purposes.

- **To develop the optimal environment settings** (see menu topic “ENVIRON.”)
  Measure the time you need to perform repeatability test with each “STABLE”, “STANDARD” and “UNSTABLE” setting. The setting with the fastest total time suits best for the existing environmental conditions.

15.2 Display Test

The display test allows you to test the display of the balance.

a) Press «<» to start “DISPLAY”.
   All possible segments and icons on the display will illuminate.

b) Press «<» to print the test information.

c) Press «C» to cancel the test procedure. The balance will return to the topic “DIAGNOSE”.

0.01 mg MS Models
**Sample Printout:**

Display Test        DONE  
------------------------
```

### 15.3 Key Test

The key test allows you to test the keys of the balance.

a) Press « » to start "KEYPAD T".

b) The message "KEY TEST - PRESS KEY TO BE TESTED" is displayed scrolling during the duration of the key test. Press every Key briefly. Each press of a key beeps and echoes with "OK" on the display.

c) Second press «C» key to print the test information. The test procedure will be cancelled and the balance will return to the topic "DIAGNOSE". If a key has not been tested before printing, then the test results will be indicated with a "----" line.

15.4 Motor Test

The motor test allows you to test the calibration motor of the balance.

**Note:** On models with internal weight only.

a) Press «ENTER» to start "CAL.MOT.T". "RUNNING" is displayed during the Motor Test. A motor test is deemed successful when all the motor positions have been successfully tested. At the end of the test, the test information will be printed.

b) Press «PRINT» for printout.

c) Press «C» to cancel the test procedure. The balance will return to the topic "DIAGNOSE".

Sample Printout:

16 Communication with Peripheral Devices

16.1 Function PC-Direct

The numerical value displayed at the balance can be transferred to the cursor position in Windows Applications (e.g. Excel, Word) as by typing with the keyboard.

Note: The units will not be transferred.

Requirements

- PC with Microsoft Windows® operating system and serial interface RS232.
- Windows Application (e.g. Excel).
- Balance to PC connection with cable RS232 (e.g. No. 11101051 see chapter accessories).
- Balance Interface Setting (see Interface Menu):
  - Topic "RS232": set "PC-DIR." and select the most appropriate option for the desired weighing result.
  - Save changes.

Settings at the PC

Note: The following examples are based on Windows XP.

a) Click "start".
b) Click "ControlPanel".
c) Click "Accessibility Options" in the Control Panel.

Accessibility Option

a) Click "General" Tab.
b) Enter a check mark at "Use Serial Keys".
c) Click "Settings".

Settings for SerialKeys

a) Select the serial port to be used for connection with the balance.
b) Set the baud rate to 9600.
c) Click "OK".
Complete the settings
a) Click "Apply" when active (wait until active).
b) Click "OK".

Note: If the "serial key" is enabled, applications that use the same port may not function correctly. Remove the check mark from the check box "Use Serial Keys" to disable serial key function.

Checking Operation
a) Start Excel (or another application) at the PC.
b) Activate a cell in Excel.

According to your selected "PC-DIR." option, the displayed values will appear in the column one after the other one in the different rows.

16.2 Installing USB Device Interface

To perform the functionality "HOST" with a PC equipped only with a USB Interface, you have to assign an appropriate USB Driver on the PC first. You can find the "NewClassic Balance USB Installer" on the METTLER-TOLEDO website at the following address:

www.mt.com/newclassic

Requirements
- Balance with USB Device Interface.
- PC with Microsoft Windows® operating system (Version , XP SP2 or Vista 32).
- Internet connection and web browser (e.g. MS Internet Explorer).
- PC to balance USB connection cable.

Installing the "NewClassic Balance USB Installer" on the PC.

a) Connect to the Internet.
b) Go to the site "www.mt.com/newclassic".
c) Click "Support" tab on the NewClassic Balance Site.
d) Click "Download Center"
e) Click "USB Driver"
Install "NewClassic Balance USB Installer.msi"

a) Click *Run* to install (recommended) or

b) Click *Save* to download.

Click *Run*.

Click *Next* and follow the Installer’s instructions.

Install your Balance

a) Switch the Balance "off".

b) Connect the Balance to the preferred USB Port on the PC.

c) Switch the Balance "on".

d) Follow the instructions of the Wizard and install the Software automatically (recommended)

**Note:** The Wizard appears again for each USB port, either on your PC or if another balance is connected.

**Warning:** Do not click "Cancel" as for the connected USB port, it might not be possible anymore to perform the installation process.
17 Firmware (Software) Updates

METTLER TOLEDO is continuously improving its balance firmware (software) for the benefit of customers. So that the customer can benefit quickly and easily from further developments, METTLER TOLEDO makes the latest firmware versions available on the Internet. The firmware made available on the Internet has been developed and tested by Mettler-Toledo AG using processes that meet the guidelines of ISO 9001. Mettler-Toledo AG does not, however, accept liability for consequences that might arise from using the firmware.

17.1 Operating Principle

You will find all the relevant information and updates for your balance on the METTLER TOLEDO website at the following address:

www.mettler-toledo-support.com

A program known as the "e-Loader II" is loaded onto your computer together with the firmware update. You can use this program to download the firmware to the balance. The "e-Loader II" can also save the settings in your balance before the new firmware is downloaded to it. You can reload the saved settings into the balance manually or automatically after the software is downloaded.

If the selected update includes an application that is not described in these instructions (or that has been updated in the meantime) you can download the corresponding instructions in Adobe Acrobat® PDF format.

Requirements

The minimum requirements for obtaining applications from the Internet and downloading them into your balance are as follows:

- PC with Microsoft Windows® operating system (Version 98, 98SE, ME, NT4.0, 2000, XP or Vista).
- Internet connection and web browser (e.g. MS Internet Explorer).
- PC to balance connection cable (e.g. No. 11101051 see chapter accessories)

17.2 Update Procedure

Installing the "e-Loader II" software from the Internet onto the PC.

a) Connect to the Internet.
b) Go to the site "www.mettler-toledo-support.com".
c) Enter the information required for registration on the METTLER TOLEDO Balance Support Site.
d) Click the "Customer Support" link and log in.
e) Click your Balance.
f) Click the firmware version you need and install it.

Loading the new firmware into the balance.

Start the "e-Loader II" and follow the instructions, which will take you step-by-step through the installation.
## 18 Error and Status Messages

### 18.1 Error Messages

Error messages in the display draw your attention to incorrect operation or that the balance could not execute a procedure properly.

<table>
<thead>
<tr>

<td>Service Reminder Your balance is due for servicing. Contact your dealer’s customer service department as soon as possible to have a technician service your balance. (See menu topic &quot;SERV.ICON&quot;)</td>
</tr>
</tbody>
</table>

0.01 mg MS Models
19 Cleaning and Service

Every now and then, clean the weighing pan, draft shield element, bottom plate, draft shield (depending on the model) and housing of your balance. Your balance is made from high-quality, durable materials and can therefore be cleaned using a damp cloth or with a standard cleaning agent.

To thoroughly clean the draft shield glass panels, remove the draft shield from the balance. When reinstalling the draft shield, ensure that it is in the correct position.

Please observe the following notes:

- The balance must be disconnected from the power supply
- Ensure that no liquid comes into contact with the balance or the AC adapter.
- Never open the balance or AC adapter – they contain no components, which can be cleaned, repaired or replaced by the user.

- On no account use cleaning agents which contain solvents or abrasive ingredients, as this can result in damage to the operation panel overlay.

Please contact your METTLER TOLEDO dealer for details of the available service options. Regular servicing by an authorized service engineer ensures constant accuracy for years to come and prolongs the service life of your balance.
19.1 Cleaning the Glass Draft Shield

**Important note**

Removing and inserting the side door glass panels and top door glass panels:
Always hold the 2 parallel guided glass panels together and parallel with one hand (see illustrations).

a) Push all the glass panels as far as they will go to the back.

b) Turn the top cover (A) to the front.

c) Pull the side door glass panels and the top door glass panels towards the back and off. (observe the important note above)

d) Turn the two lock covers (B) on the front as far as they will go to unlock the front glass.

e) Tilt the front glass forward and pull it out.

f) Remove draft ring.

g) Remove weighing pan.

h) Remove drip tray.

After cleaning reinstall all components in reverse order through the observance of the important notes.

**Important note**

- Side door glass panels: The guide pin must be placed in the guide slot (C).

- After inserting the glass doors (side and top), close the top cover so that they can not fall out.

- Front glass: The writing "front" must be show forwards.
20 Interface Specification

20.1 RS232C Interface

Each balance is equipped with an RS232C Interface as standard for the attachment of a peripheral device (e.g. printer or computer).

| | Standard | In conformity with USB Specification Revision 1.1 |
| | Speed | Full speed 12 Mbps (requires shielded cable) |
| | Function | CDC (Communication Device Class) serial port emulation |
| | Power usage | Suspended device: Max 10 mA |
| | Connector | Type B |

### 20.3 Aux Connection

You can connect the METTLER TOLEDO “ErgoSens” or an external switch to socket Aux. This allows you to start functions such as taring, zeroing or printing.

![External connection](image)

**External connection**
- **Connector:** 3.5 mm stereo jack connector
- **Electrical data:**
  - Max. voltage 12 V
  - Max. current 150 mA

### 20.4 MT-SICS Interface Commands and Functions

Many of the balances and scales used have to be capable of integration in a complex computer or data acquisition system.

To enable you to integrate balances in your system in a simple manner and utilize their capabilities to the full, most balance functions are also available as appropriate commands via the data interface.

All new METTLER TOLEDO balances launched on the market support the standardized command set “METTLER TOLEDO Standard Interface Command Set” (MT-SICS). The commands available depending on the functionality of the balance.

**Basic information on data interchange with the balance**

The balance receives commands from the system and acknowledges the command with an appropriate response.

**Command formats**

Commands sent to the balance comprise one or more characters of the ASCII character set. Here, the following must be noted:

- Enter commands only in uppercase.
- The possible parameters of the command must be separated from one another and from the command name by a space (ASCII 32 dec., in this description represented as \( \text{ } \)).
- The possible input for “text” is a sequence of characters of the 8-bit ASCII character set from 32 dec to 255 dec.
Each command must be closed by \texttt{CRLF} (ASCII 13 dec., 10 dec.). The characters \texttt{CRLF}, which can be inputted using the Enter or Return key of most entry keypads, are not listed in this description, but it is essential they be included for communication with the balance.

**Example**

**S – Send stable weight value**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
<th>Response</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>\texttt{S}</td>
<td>Get the current stable net weight value.</td>
<td>\texttt{S}<em>{\text{\textbullet}}\texttt{W}</em>{\text{\textbullet}}\texttt{eightValue}_{\text{\textbullet}}\texttt{Unit}</td>
<td>Current stable weight value in unit actually set under unit 1.</td>
</tr>
<tr>
<td>\texttt{S}_{\text{\textbullet}}\texttt{I}</td>
<td>Command not executable (balance is currently executing another command, e.g. taring, or timeout as stability was not reached).</td>
<td>\texttt{S}_{\text{\textbullet}}+</td>
<td>Balance in overload range.</td>
</tr>
<tr>
<td>\texttt{S}_{\text{\textbullet}}-</td>
<td>Balance in underload range.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Example**

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
<th>Response</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>\texttt{S}</td>
<td>Query a stable weight value.</td>

21 Technical Data

21.1 General Data

Power Supply
- Power input balance: 12VDC, 2.25A
- AC/DC adapter:
  - Primary: 100V–240VAC, -15%/+10%, 50/60Hz
  - Secondary: 12VDC ± 3%, 2.25 A (with electronic overload protection)
  - Use only with a tested AC Adapter with SELV output current.
  - Ensure correct polarity
- Cable to AC/DC adapter: 3-core, with country-specific plug

Protection and Standards
- Overvoltage category: Class II
- Degree of pollution: 2
- Degree of Protection: Protected against dust and water
- Standards for safety and EMC: See Declaration of Conformity (separate document)
- Range of application: For use only in closed interior rooms

Environmental conditions
- Height above mean sea level: up to 4000 m
- Ambient temperature range: 10 to 30 °C
- Relative air humidity: 10% to 80 % at 31 °C, linearly decreasing to 50 % at 40 °C, noncondensing

Materials
- Housing/Terminal: Die-cast aluminum / Plastic (PA12)
- Weighing pan: Stainless steel X2CrNiMo 17-12-2 (1.4404)
- Draft shield element: Stainless steel X2CrNiMo 17-12-2 (1.4404)
- Draft shield: Plastic (PBT), glass
- In-use-cover: Plastic (PET)

21.2 Explanatory Notes for the METTLER TOLEDO AC Adapter

METTLER TOLEDO Balances are operated with a certified external power supply which conforms to the requirements for Class II double insulated equipment and it is not provided with a protective earth connection but with a functional earth connection for EMC purposes. Information about conformance of our products can be found in the "Declaration of Conformity" which is coming with each product.

Consequently an earth bonding test is not required. Similary it is not necessary to carry out an earth bonding test between the supply earth conductor and any exposed metalwork on the balance.

In case of testing with regard to the European Directive on general product safety the power supply and the balance has to be handled as Class II double insulated equipment.

Because high resolution balances can be sensitive to static charges a leakage resistor, typically 10 kOhm, is connected between the earth connector and the power supply output terminals. The arrangement is shown in the equivalent circuit diagram. This resistor is not part of the electrical safety arrangement and does not require testing at regular intervals.

RS232 - USB converter – intelligent expansion module for connection to PC

Cables for USB Interface

USB (A – B) connection cable for connection to PC, length = 1 m

Auxiliary Displays

LC/RS-BLD auxiliary display on bench stand, backlit (incl. RS cable and separate AC adapter)

External Switches

ErgoSens, optical sensor for hands-free operation

Auxiliary Footswitch with selectable function for balances

AC Adapters

AC/DC adapter (without power cable) 100–240 VAC, 50/60HZ, 0.3 A, 12 VDC 2.25 A

Power cable CH
Power cable EU
